

# How to Configure IIS

---

1. Click on Start ----> Control Panel -----> In the Programs category, Click on Get Programs-----> Click on Turn Windows Features on or off-----> A new dialog box will appear in which select the Internet Information Services----->Click Ok
2. It will Install Internet Information Services on your computer and a folder named INETPUB will be created on C drive
3. Now check IIS by opening Internet explorer and typing the address <http://localhost> or <http://ipaddress> (IP address of your system) or <http://computername> (Your computer name) or <http://fullcomputernamewithdomain> (ex: cl-101.jiet.co.in)
4. A default page named IISstart.html will open.
5. Create a web page named index.html and copy it inside the directory C:\Inetpub\wwwroot
6. Now check your home page by opening local site as done in **step 3**. Now your home page will open
7. By default, the default physical path for website is **C:\Inetpub\wwwroot**. You can add your folder as a default physical path.
8. Create a folder named as **yourname** inside the folder C:\Inetpub\wwwroot\ and cut index.html file from the folder wwwroot and paste it inside the folder **yourname** (like ram, mohan etc.). Now the physical path of your web site is now **C:\Inetpub\wwwroot\yourname**
9. In order to change the default website path to your desired website path, Click on Start ---> Control Panel ----->Click on drop down icon on Viewed by Category----->Click on Small Icons----->Click on Administrative Tools----->click on Internet Information Services Manager----->Click on computer name in the left side in the Connections menu----->Click on sites----->Select Basic setting in the options given at the right side.
10. A new dialog box named as Edit site will open. Change the physical path form %SystemDrive%\inetpub\wwwroot to %SystemDrive%\inetpub\wwwroot\yourname ----->Click ok
11. Now again check your home page by opening local site as done in **step 3**. Now your home page will open

**By this way you can be able to host your website by using html page.**
